Education

National Taiwan University *Sep 2023 - Present*

BS in Computer Science and Information Engineering (Senior)

- GPA: 3.98/4.3
- Coursework: System Programming, Computer Security, Machine Learning

Experience

Secure Systems Researcher Taipei, Taiwan

NTU CSIE *July 2025 - Present*

- Read and analyze 10+ papers about system security, reliability, and fault tolerance.
- Currently working on novel exception handling for rust driver in the Linux kernel.

Teaching Assistant (Data Structures and Algorithms) Taipei, Taiwan

NTU CSIE *March 2025 - June 2025, March 2026 - June 2026*

- Prepare the last programming problem for Homework 2. (Simulate bicycle parking slots as a tree)
- Help students with their programming assignments.

Teaching Assistant (Introduction to Computer Programming) Taipei, Taiwan

NTU CSIE *September 2025 - December 2025*

- Prepare three exams as well as three mock exams.

Projects

OwoJudge (Backend Developer) Github Link

- Developed a containerized, multi-language backend for a competitive programming platform, featuring a decoupled architecture and MongoDB. The user can submit their code via git.
- Tools Used: TypeScript, Node.js, MongoDB, ioi/isolate, Docker
- Weakness: Currently, the system is only for DSA course. Some advanced features were not implemented.

Challenge2025 Github Link

- Design the game for high school students to write python agents and learn how to collaborate with a medium-sized team (13 people).
- Tools Used: Godot, Git, Python
- Weakness: We use socket programming to implement the communication between the game server and the agents, which cause the performance and reliability issue.

PseudoCode Interpreter Github Link

- Implemented a pseudo-code interpreter with a recursive abstract syntax tree (AST) and JIT.
- Tools Used: C++, Object-Oriented Programming, Data Structures.
- Weakness: It is specialized to DSA course, not a general programming language.

Technical Skills

- Languages: C/C++, Python, TypeScript, Rust
- Technologies: Unix System Programming, Object-Oriented Programming, Data Structures, Algorithms
